

# Transform your water purification with WCC

## Ditch the DI Exchange tanks!

DI polishing tanks require nasty onsite chemicals for regeneration. For this reason, most facilities rent exchangeable tanks from a local provider. Exchange tanks are often expensive, dirty, cumbersome and—recently—hard to find. WCC can help facilities reduce or completely eliminate the need for DI exchange services. Using the latest technologies, we offer systems for ultrapure water polishing that feature lower costs, less maintenance, and less hassle than ever before.

### Electrodeionization (EDI) Technology: The Future of Water Purification

- **Long-Term Solution:** Enjoy 5-7 years of maintenance-free polishing with up to 18+ Megohm.
- **Seamless Integration:** Easily adaptable to your existing RO system.
- **Hassle-Free:** Eliminate the need for exchange tanks and the associated costs and worries.
- **Cost-Effective:** Designed to pay for itself quickly, with most systems achieving ROI in three years or less.
- Available in pre-packaged skid systems with all necessary accessories.

### DI Cartridge Tank Systems: An Easier Option for Ultrapure Polishing

- **Top-Quality Media:** Our cartridges use high-grade, mixed bed DI exchange resin.
- **Effortless Changeouts:** Quick and easy cartridge replacement process.
- **Versatile Options:** Available in multiple grades to suit your needs—Type I, Type II, CLRW, Semiconductor, etc.
- **Flexible Ordering:** Purchase individual cartridges or in case quantities according to your usage requirements.
